### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election with traverse of Group I (claims 1-5) in the reply filed on 7/19/07 is acknowledged. The traversal is on the ground(s) that searching for both the Groups would not be a serious burden to the examiner as electronic searching is commonly performed. This is not found persuasive because they lack the same or corresponding special technical features and the reasoning is provided in the previous office action.

The requirement is still deemed proper and is therefore made FINAL.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-2,4 are rejected under 35 U.S.C. 102(b) as being anticipated by Toshiharu (JP-09082665 A).

Toshiharu disclose a process of surface flattening of a semiconductor device substrate including the step performing a plasma processing while supplying liquid chemical such as water onto the substrate (see the abstract and the paragraphs 0018,0029 of the translated version of the reference).

Application/Control Number: 10/550,020 Page 3

Art Unit: 1765

## Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 6. Claims 3 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toshiharu (JP-09082665 A) as supported by Okudaira et al (4,705,595).

Toshiharu discusses above in the paragraph 3 but fails to explicitly teach that the plasma includes radicals, positive or negative ions based on the plasma are selectively supplied to the substrate.

However, it would have been obvious to include radicals, positive or negative ions in Toshiharu's plasma because by definition, plasma includes ions and radicals as supported by Okudaira et al.

Application/Control Number: 10/550,020

Art Unit: 1765

Okudaira et al illustrates that an etching process by plasma. It is known that "lons" in plasma and "radicals which are neutral particles, but also are reactive species" usually react with the sample (col.3, lines 65-col.4, lines 5).

As to claim 5, it is obvious that radicals are supplied with high-speed in a plasma etching process as neutral radicals has slow reaction if only neutral radicals are present as suggested by Okudaira et al.

#### Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. JP-60-59736 illustrate semiconductor insulation film flattening method makes plasma etching of isolation film on water.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shamim Ahmed whose telephone number is (571) 272-1457. The examiner can normally be reached on M-Thu (7:00-5:30) Every Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nadine G. Norton can be reached on (571) 272-1465. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
